

DYM-550HV

Excellent smooth surface Semi-conductive Conductor & Bonded Insulation Shielding compound for High Voltage Power Cables (Up to 275kV)

Description

DYM-550HV is a cross-linkable semi-conductive conductor and bonded insulation shielding compound for high voltage power cables. It is specially designed to have the optimized physical properties and hard condition resistant properties by using high conductivity Carbon drawn by the application of **CNT (Carbon Nano Tube)** Technology. This product provides excellent smooth surface and electrical conductivity properties.
